Reforms of the Education System will Create the Foundation of a New Renaissance in Uzbekistan

Jamaliddinova Dilnozahan Mirhojiddinova, Khakimova Zulfiyaxan Mehmanalieвна-

Doctor of Philological Sciences, Professor of the KSPI, Uzbekistan

KSPI 2nd year undergraduates, Uzbekistan

Annotation: in this article ,along with talking about the requirements of the khalkhoro assessment program and the principles of its introduction into the education system, important signs of PIRLS ,PISA international assessment programs are revealed, relying on the opinions of foreign scientists and research work.

Keywords: quality of Education, International Assessment, Pirls, Pisa, National Center, foreign experience,reading literacy,level of understanding,education system.

As we all know,after our state gained its independence, practical efforts began to radically reform the educational sphere, as in all areas.Over the past period, in order to improve the quality and effectiveness of education, the decisions that are being developed and put into practice and their implementation are an important impetus for the radical reform of the education system.At the same time,issues of improving the educational system and accelerating the development of the field of Science in our country, which were held under the chairmanship of President Shavkat Mirziyoyev a video projector was held on the discussion.At the meeting, the head of state discussed the issues in the field of education and the tasks of solving them and improving the quality of Education.The head of Davaltimiz noted that first of all,it is necessary to revise the educational load and the number of lessons in schools,to create a methodology that encourages students not only to memorize, but also to think.An example of the experience of countries with developed educational systems in this regard was given.

— If the methodology of teaching at school does not change, there are many who argue that neither the quality of education,nor the content,nor the environment will change, Shavkat Mirziyoyev. Experts in the field have been told many times about the importance of introduction in the schools of our country by studying modern educational programs, teaching methods in the world. And in order to change the teaching methodology in schools, we need to apply and apply the advanced experience of the states in which the educational system is developed on a large scale to the educational system of our country.

Comprehensive support of creative ideas and creativity of young people who are followers of our future in a time when our country is rapidly developing on the path of innovative development, the formation of their knowledge, skills and abilities, and improvement of the assessment system based on advanced foreign experiences, international criteria and requirements, the study of international experiences in this way,

Decree of the VM of the Republic of Uzbekistan dated December 8, 2018 No. 997 “on measures to organize international research in the field of assessing the quality of education in the public education system” under the state inspectorate for quality control of Education under the Cabinet of Ministers of the Republic of Uzbekistan “National Center for the implementation of international research on

In the decree of the president of the Republic of Uzbekistan dated April 29, 2019 "on approval of the concept of development of the system of public education of the Republic of Uzbekistan until 2030"PF-5712, according to the

rating of the international program of PISA by 2030, to achieve its entry into the top 30 advanced countries of the, the tasks of creating a national system for assessing the quality of education, aimed at assessing the level of literacy in mathematics and natural sciences, are defined. General secondary education is carried out in the country on social economic reforms, advanced experience of developed foreign countries, as well as organization based on science and modern information and communication technologies, education of a spiritually developed and intellectually developed person. Today, all spheres of the life of New Uzbekistan have become the arena of deep reforms. In this process, it is impossible not to wave and talk about changes in the educational system, which is considered the basis of the social sphere. In our country, in recent years, practical work on the organization of all stages of the educational system on the basis of modern requirements has entered a decisive stage. As the president noted “ ” the more educated our children turn out to be from school, the faster the sectors of the economy based on high technologies develop, the more social problems can be solved. Therefore, if I say that the threshold of New Uzbekistan begins with school, I think that all our people will support this idea.” The main part of the reforms carried out in the field of education, of course, is the reforms in the system of Higher Education. In particular, setting priorities for the systematic reform of higher education in the Republic of Uzbekistan, raising the process of training highly qualified personnel with independent thinking to a qualitatively new level, modernization of Higher Education, the concept of the development of the higher education system of the Republic of Uzbekistan until 2030, approved by the decree of the head of state of the Republic of Uzbekistan dated October 8, 2019, for the development of social and economic sectors based on advanced educational technologies, serves as a prelude to new reforms in the field. In order to accelerate intellectual development, prepare competitive personnel, effectively organize scientific and innovative activities, and strengthen international cooperation, the document provides, tasks such as the development of educational and production integration were taken as a basis. It is not for nothing that the president of our country, the leader began his career as a leader from a meeting with academics, leading scientists of our country, people of Science in general, and focused on harmonizing the development of Science in our country with the development of production. Reforms in the field of Education give high results: our president Shavkat Mirziyoyev held a meeting on the issues of reforming the educational sphere, further development of the vocational education system and improving test tests on admission to The Bachelor's degree of Higher Education. It was attended by the Prime Minister of the Republic of Uzbekistan, heads of relevant ministries and organizations. Since the first years of independence in our country, the development of the education and education system has been promoted to the level of public policy, the acquisition of modern knowledge and professions in conditions suitable for the world standards of our children, the provision of adult education as physically and spiritually mature people, the realization of their abilities and talents, intellectual potential, in the hearts of our youth, great work is being done to mature the feelings of devotion and dedication to the native land. The decree of the president of the Republic of Uzbekistan dated February 7, 2017 “on the strategy of actions for the further development of the Republic of Uzbekistan” defines a number of tasks related to the development of the social sphere, in particular, education and science. The document provides for the strengthening of the material and technical base of educational institutions, the construction, repair and overhaul of new educational institutions, as well as their modern educational and laboratory equipment, it is envisaged to provide computer equipment and educational and methodological manuals. In 2017-2021, their independence will be gradually developed by expanding the competence of higher educational institutions in the development of a program of radical improvement of the higher education system, further improvement of educational programs, the provision of paid services and the search for additional sources of financing. In the next year, seventy decisions, decrees and orders of the president of the Republic of Uzbekistan and the Cabinet of ministers were adopted. This literally initiated the process of changes and updates in the educational system. For the first time in the current year, the admission of students to the 10th grade was established in the secondary special education system. This was equated with the admission process to academic lyceums and professional colleges. This mainly took into account the wishes and wishes of parents and students. The president emphasized that it is necessary to take into account the opinions of parents and students on further improvement of the work carried out in the field, organize events with them, such as "open doors" days, and hold meetings. In the 2016/2017 academic year, more than 466 thousand students graduated from secondary schools, of which more than 170 thousand entered vocational colleges. 288 thousand, that is, more than sixty percent continue to study in 10 classes. As the reforms carried out in the education system were

discussed at the meeting, special attention was also paid to the issues of professional development of youth, education of students in the spirit of patriotism. In this, the study of the heritage of our great ancestors by young people, particular attention is paid to the fact that they become suitable mature personnel. The establishment of a specialized school for deepening and teaching in the direction of information and communication technologies named after our great ancestor Mohammed al-Khorezmi was also the first step in the implementation of this task. The establishment of this school provides the basis for training personnel from an early age, training personnel in the field that are mature and meet the requirements of the time. Also, The decision of the president of the Republic of Uzbekistan “on the establishment of a specialized state comprehensive boarding school named after Mirzo Ulugbek and the Garden “Astronomy and aeronautics” was adopted. With this decision, a specialized State Secondary School named after Mirzo Ulugbek will be organized at the Institute of astronomy, which will teach mathematics, astronomy, physics and computer science in depth. One of the requirements that schools are put in front of – together with the formation of a highly qualified teacher-pedagogical base, a connoisseur of its field, it is the practical teaching of a foreign language at school. It was emphasized that the creation of such specialized schools serves to educate young people in the spirit of patriotism. At the meeting, the issue of vocational guidance of students of grades 8-9 was also considered, having studied the possibility and potential of the regions. This will open the door to new opportunities in the professional acquisition of students at the next stage of Education. Now the training of graduates of secondary schools in a profession close to Elik is established. For this, it is planned to establish modern equipped educational production centers on the basis of professional colleges and secondary schools. Also, some vocational colleges are attached to enterprises and organizations to the relevant ministries and departments. "Secondary special" of the president of the Republic of Uzbekistan on March 14, 2017, the decision”on measures to further improve the activities of vocational education institutions " is an important factor in this regard. This makes it possible to increase the share of these institutions in the training of personnel and create guaranteed jobs. The president of our country gave the task to the heads of industry to go out to the places in this regard and study which area needs specialists in this field. The meeting discussed measures that should be implemented on educational institutions. Improving educational processes in higher educational institutions, educating young people on the basis of modern requirements is one of the main issues of today. In this regard, it is important to ensure the openness and transparency of the tests to higher educational institutions. The head of state also gave instructions to develop proposals for improving the tests of higher educational institutions in The Bachelor's degree, to apply the most advanced experience tested in developed foreign countries, to ensure transparency of the test tests. Since the first days of the presidential activity, the head of state has been paying special attention to the issues of innovative and creative thinking in our country, training of modern personnel, educating young people in a patriotic spirit, as owners of high spirituality, improving the educational system for this purpose. The president of the Republic of Azerbaijan, at the meeting, expressed his opinion about the reforms carried out in our country to reform the school education system, about the urgent tasks facing us in this regard, special attention was paid to the essence and significance of this issue, noting the opinion of our great-enlightened grandfather Mahmudhoja Behbudi that “the greatest among the world's officials is the school.” Indeed, looking at the history of developed countries in the world, we see that reforms aimed at changing the life of society in them began primarily with the education system, kindergarten, school, upbringing. Because it is impossible to change a person, society, without changing the school. The basis, the foundation of education and upbringing is – school. And the power that makes the school a school is that of teachers. It is known that the spiritual and educational environment in schools, the prestige of the teaching profession, the upbringing of teachers of the new era, the development of pedagogical science, insufficient attention to the introduction of innovative educational technologies caused a number of serious problems in the field. In the following years, a huge amount of work is being carried out in our country to effectively solve these problems, to radically improve the personnel training system. The president of the Republic of Azerbaijan adopted 6 decrees and resolutions on the public education system, 21 Decisions of the Cabinet of Ministers and strengthened the legal and regulatory framework for reforms in this area. Taking into account the wishes of parents and the public, the system of 11-year school education was restored in our country. Over the past three years, 157 secondary schools have been built anew in our country. Our great scholars – The creation schools named after Mirzo Ulugbek and Muhammad Khorezmi, as well as schools of talented children named after Hamid Olimjon and Zulfiya, Erkin Vahidov, Abdulla Oripov, Ibrayim

Yusupov, is'hokhan Ibrat, Muhammad Yusuf, Halima Khudoyberdiyeva, "Temurbeklar school", Presidential schools, private schools are opening up new opportunities for the children of our country in terms of Education. Taking into account the special role and influence of male teachers in the effective conduct of educational and educational work, as a result of the specific measures taken, 12 thousand 871 male teachers returned to the public education system. Great work is being done to stimulate the labor of pedagogical workers. In the last 3 years, teachers' salaries have been increased by an average of 2.5 times. Specific criteria were set for stimulating the labor of pedagogical personnel who go to distant districts and work. They are paid up to 50 percent extra monthly bills. This made it possible to attract more than a thousand teachers who are lacking in remote areas. Teachers who continue their activities at retirement age are given a full pension. Today, Education in our state has risen to the level of Public Policy. Sufficient funds are provided from the state budget. All schools, colleges, academic lyceums, institutions of higher education are provided with sufficient textbooks, additional literature, teaching aids. Modern educational tools such as information technologies, the internet have also penetrated into the remote areas of our republic. This does not give rise to any treatment in the study of science. The attention paid to education is an important foundation in our construction of new Uzbekistan can serve as.
