

# The Role of the Works of Our Scholars in the Development of a Systematic Approach to the Spiritual Education of Young People

**Sayora Safarovna Kulmurodova**

Teacher of the department of pedagogy, Faculty of Pedagogy, Uzbekistan-Finland Pedagogical Institute

**ABSTRACT:** This article talks about nationality, ideology, spirituality, people, youth, manners, society, neighborhood, education, community, family, dream, goal, system.

**KEYWORD:** National, ideologe, people, manners, societe, neighbourhood, education, team, family, dream, goal, concept.

The main goal of the democratic changes, renewal processes and reforms implemented in our country is to build a free and prosperous country, a developed civil society, thus ensuring the prosperity of the people, taking a proper place in the world community, and achieving the sustainability of the education of the youth. It is important to educate our future heirs based on the scientific heritage of our ancestors. Because our Republic is consistently pursuing the policy of raising its economy to a new level, liberating and democratizing society, we need a concept focused on the problems and prospects of the systematic organization of youth education, which is the basis of society. In fact, the concept serves to introduce the scientific heritage brought by our scholars to the youth of Uzbekistan in harmony with today's education and education, to imagine the future of its development, to predict positive and problematic issues in systematic education, and to determine the causes and factors of existing problems.

At present, scientific-methodological works dedicated to the illumination of our spiritual and national values, customs and traditions, mainly in private cases, that is, about the creative work and scientific discoveries of the life of one scholar or another of our dear saints, are carried out using some pedagogical methods and styles. placed In the order of the President of the Republic of Uzbekistan No. IIK-4307 dated May 3, 2019, "Additional measures to increase the effectiveness of spiritual and educational work. Systematic organization of spiritual and educational work in our country, increasing the effectiveness of the measures implemented in this regard, intellectual development of the population, especially young people special attention is paid to raising the capacity, consciousness and world view, strengthening ideological immunity, raising the mature generation living with a sense of patriotism, love and loyalty to the nation.

At the moment, in the theoretical and practical work carried out in the spiritual and educational direction in our Republic, it is a matter of systematic implementation of materials rich in traditions and customs from the works and great discoveries of the lives of our great thinkers, scholars, dear saints to the spiritual world, national values, traditions and customs, in harmony with the successes achieved in the years of independence. is gaining importance due to its popularity.

It is clear to all of us that the fate and future of today's society and the people living in it are closely related to the education of young people, who are considered to be the leading forces of the states.

From this it can be concluded that: the issue of applying the materials rich in traditions and customs to the world of spirituality, national values, traditions and customs taken from the lives, works and great discoveries of our great thinkers, scholars, and our dear parents is a matter of systematic approach to life based on a systematic approach.

Today, due to the rapid development of science, achievements in various fields of science are rapidly being updated. Systematic organization of spiritual and educational activities in the higher education system, raising the intellectual capacity, thinking and worldview of young people, and strengthening the spiritual and moral consciousness of students aimed at educating them as a mature generation living with the feeling of service for the interests of the people, stems from the need of the times. Today, raising the spiritual world of young people and educating them in the spirit of national and universal values is one of our most important tasks. Education of the young generation is a very difficult issue, it requires dedication, strictness and demandingness in education and training, modern and effective methods and means of work.

We pay attention to the issue of the spiritual world of the young generation studying in educational institutions on the basis of the materials taken from the lives of our great thinkers, scholars, and great discoveries, and this dissertation research serves to a certain extent in the implementation of the tasks specified in other normative legal documents related to this field.

As a result of the wide-ranging reforms implemented in the field of higher education in our country, the process of improving the quality of education based on modern requirements, including the development of the level of spiritual education of young people based on advanced technologies of a systematic approach, is gaining importance.

Uzbekistan has produced many great thinkers and scholars who have made a significant contribution to the development of world civilization and are recognized on a global scale. The rich heritage left by our ancestors still amazes the people of the whole world with its great importance and scientific potential. It is one of the most important tasks of today to study the valuable parts of the history of our country and to use such examples of heritage to form perfect people. It is one of the important tasks of today's youth to use the treasure of their ancestors who left an immortal legacy in the systematic organization of the education of our youth today.

Today, special attention is paid to studying and promoting the rich heritage of our enlightened ancestors, who made a great contribution to the development of our national culture, science, literature and art, and to inculcate its essence in the consciousness of the young generation.

In the past, our grandfathers, heads of state, commanders, emirs wanted the people to be highly spiritual and enlightened, and based on the conditions of their time, they took all possible measures to carry out such a responsible and honorable work. Poets and scholars, respected representatives of Islam were always the founders and self-sacrificing propagandists of spirituality and enlightenment. In the sources that have reached us, the ideas of noble intention, kindness, loyalty, humanity, hard work, friendship, decency, kindness, simplicity, love and humility prevailed. These ideas have reached the hearts of millions of people and made a huge contribution to their education and are still contributing.

As stated by I.A. Karimov: "The idea of national independence built on the basis of the centuries-old traditions, customs, language and spirit of our people, in harmony with universal human values, conveys the feeling of confidence in the future to the hearts and minds of people, educates them in the spirit of love for the Motherland, humanity, honesty, it is necessary to serve in the way of educating masculinity and patience, the sense of justice, the pursuit of knowledge and enlightenment"

Oriental education is nourished by the roots that go back to modern times, the theory and practice of education. His educational ideas took root during each historical period and stage, embodying the essence of social and political processes. It is known that our forefathers knew that since ancient times, science and education, which is an invaluable wealth, is the most important condition and guarantee of human maturity and development of the nation. Of course, education is a product of consciousness, and at the same time, the level of consciousness is the most important factor that determines and enriches its development. Therefore, it is impossible to develop spirituality without changing the education system and the consciousness based on it. Therefore, superficial, official approaches and ill-thought-out actions are absolutely unacceptable in this field. We must not forget that our future is created in the foundations of education, in other words, the future of our nation depends on the education of our children today.

Within the framework of the dynamic processes of modern education, the stylistic activity of the teacher is constantly enriched from simple to complex and turns into knowledge, skill and skill. Here, the role of functions changes: information, its constituent part, falls into the background, and stability is given to its design, organization, communication and other functions.
