**Abstract**

Conventional rural banks are banking financial institutions that function as intermediaries in the economic field that bring various impacts in the smooth implementation of the development of the city of Sidoarjo. Good governance and loans are one of BPR main activities as an intermediary institution. Hot mud overflowed. Lapindo in Sidoarjo, East Java, which has occurred since May 29, 2006 has given the banking world, especially Conventional Banks in Sidoarjo, the inability to pay customers due to loss of jobs and livelihoods resulting in bad loans and credit restructuring processes. For the existence and continuity of business and increasing the competitiveness of Conventional Banks, the integration of good corporate governance (GCG) and credit restructuring is carried out. The purpose of this study is to examine the effect of the integration of Good Corporate Governance (GCG) and credit restructuring on the business performance of Conventional Rural Banks in Sidoarjo. This research is an explanatory research using 72 respondents, namely commissioners, managing directors, compliance directors and conventional BPR managers in Sidoarjo. The variables used in this study are Managerial Ownership, Board of Commissioners, Directors, Audit Committee, Credit Resceduling, Credit Reconditioning, Credit Restructuring and Business Performance. The analytical tool used is the PLS Structural Equation Modeling (SEM) approach. The results of this study indicate that the integration of Good Corporate Governance and Credit Restructuring can be done either partially or simultaneously and proven to influence the business performance of Conventional Rural Banks in Sidoarjo. The most dominant variable affecting the performance of Conventional Banks is the board of directors variables.

**Abstract**—Conventional banks are banking financial institutions that function as intermediary institutions in the economic field that bring various impacts in the smooth implementation of the development of the city of Sidoarjo. Good governance and lending are one of BPR's main activities as an intermediary institution. Hot mud overflow. Lapindo in Sidoarjo, East Java, which has occurred since May 29, 2006 has given the banking world especially Conventional Banks in Sidoarjo, namely the inability to pay customers due to loss of jobs and livelihoods resulting in bad loans and credit restructuring processes. For the existence and continuity of business as well as enhancing the competitiveness of Conventional Banks, good corporate governance (GCG) integration and credit restructuring are carried out. The purpose of this study is to examine the effects of the integration of Good Corporate Governance (GCG) and credit restructuring on the business performance of Conventional Banks in Sidoarjo. This research is an explanatory research using 72 respondents, namely commissioners, main directors, compliance directors and managers of conventional banks in Sidoarjo. The variables used in this study are Managerial Ownership, Board of Commissioners, Audit Committee, Credit Responding, Credit Reconditioning, Credit Restructuring and Business Performance. The analytical tool used is the PLS Structural Equation Modeling (SEM) approach. The reason is because all variables in this study cannot be measured directly or, latent variables. The results of this study indicate that the integration of Good Corporate Governance and Credit Restructuring can be done either partially or simultaneously and is proven to have an effect on the business performance of Conventional Banks in Sidoarjo. Extensive and prolonged negative impacts until 2019, including

## I. INTRODUCTION

In Indonesia, the conventional banking system, both commercial banks and people's credit banks is very good and always tries to improve the ability of financing for the economy of the community. Bank Credit Products increasingly diverse and increasing branch offices and

services to the community in the micro and medium business sector. In the city of Sidoarjo the conventional People's Credit Bank is of great interest to the public in obtaining benefits from financial institutions both for consumptive activities, investment and working capital. On the other hand, the uncertainty of community livelihoods also colored the rate of return of borrowed funds resulting in a credit restructuring. Based on this it is necessary to integrate good corporate governance and credit restructuring at the BPR so that business performance is increasing.

Good corporate management is a system that regulates the relationship between the roles of the Board of Commissioners, the Board of Directors, shareholders and internal audit. Good corporate governance is also referred to as a transparent process of determining company goals, implementing and improving BPR performance. The GCG dimension consists of the Board of Commissioners, the Board of Directors, Shareholders and Internal Audit. In financial institutions, there is a lot of debate about the role of effective shareholders by implementing good corporate governance (Davis, 2002). As a governance mechanism, institutional investors are very important for bondholders (Bhojraj & Sengupta, 2003; Bianchi & Enriques, 2005; Fama & Jensen, 1983; Grossman & Hart, 1986; Jensen & Meckling, 1976; López-Iturriaga, García-Meca, & Tejerina-Gaite, 2015; Shleifer & Vishny, 1997). A strong shareholding makes it easier to monitor debt costs and risk reduction standards and corporate governance improve company performance in the long run (Boubakri & Ghouma, 2010). Thus effective corporate governance can reduce the risk of default by monitoring managerial opportunistic behavior and affect the integrity of the financial accounting reports (Ramly, 2013). thus effectively reducing the cost of debt or reducing the risk of default (Ramly, 2013) and consequently more capital is increased.

In resolving bad loans, credit restructuring is carried out as an improvement effort made by the BPR to debtors

who experience credit settlement problems. There are 3 dimensions of credit restructuring, namely: a. reschedulling , Aiming to change the payment schedule installments, extension of debt repayment period and interest arrears. b. reconditioningk , Aiming to changes in interest rates, the granting of waivers, additional collateral , c. restructuring , Activities aimed at diverting collateral / foreclosed properties (foreclosed assets) and write-offs / write-off .

Business performance is a form of achieving company goals through strategies in which there is intellectual capital and knowledge. The company's business performance can be achieved through corporate resources, branding, management capabilities, business strategies and knowledge transfer. (Sharabati, Shamari, Nour, Durra, & Moghrabi, 2016) The problem faced by Conventional BPR in Sidoarjo is the number of complaints related to credit problems that require the handling of credit restructuring, all of which can be done if the governance of BPR is very good, especially from shareholders who will give up the amount of dividends as a reserve for business restructuring costs that will affect the performance business in particular is the achievement of capital and is influenced by the ability of resources in management and good business strategies to achieve business performance improvement. This research was conducted at the Sidoarjo People's Credit Bank incorporated in East Java PERBARINDO, among others:

Based on the table above the AVE value in the Good Corporate Governance (X1) variable is 0.540, credit restructuring is 0.624 and Business performance is 0.625. The three variables are said to be valid because they have

According to the table above, the value of composite reliability variable good corporate governance (X1) is 0.854 , restructured loans (X2) is 0.833 , business performance (X3) is 0.892, which is all of the value is more substantial than 0.7 which means the value of data from variables X1, X2, and Y have good reliability or it can be said that the values of both independent and dependent variables are reliable.

The research hypotheses are as follows: a. there is a partial influence of good corporate governance (GCG) on the performance of conventional BPR businesses in Sidoarjo , b. There is an effect of partial credit restructuring integration on conventional BPR business performance in Sidoarjo, c. there is a partial influence of good corporate governance (GCG) and credit restructuring on the performance of conventional BPR businesses in Sidoarjo

## II. RESEARCH METHODS

This research is a quantitative research with explanatory research, the population is all Conventional Rural Banks incorporated in PERBARINDO Sidoarjo which are performing well and received the 2018 infobank award , the sample is taken by sampling technique saturated based on a population of 72 respondents (shareholders, commissioners, main directors and compliance directors , managers , auditors and chief supervisors ). The instrument used was a questionnaire with interviews to strengthen the indicators contained in the questionnaire. The analysis tool uses SEM-PLS Wrap 5.0 software (inner and outer models) .

## III. RESULTS AND DISCUSSION

### A. Data Quality Testing

#### 1. Validity and Reliability Test

Validity test based on the results obtained AVE (Average Variance Extraced) value greater than 0.5.

an Average Variance Extraced (AVE) value of more than 0.5.

Reliabilitas test is determined by *the internal Consistency Reliability* to see *Composite Reiability* whose value must be greater than 0.7.

#### 2. Inner Model Testing (Structural Model)

Structural model testing is used to determine the magnitude of the effect, it can be seen in the value of R-squares on the Y variable in this study. Effect sizes can be grouped into 3 categories: weak (0.02), medium (0.15) and large (0.35).

TABLE IV. VALUES OF R-SQUARED COEFFICIENTS

R-squared coefficients		
-----		
GCG	RK	BP
	0.402	

Source: R-Square value results in SEM-PLS Warppls 5.0

From the above table in the know value at variabel *Business performance* (Y) of 0.402, or 40.2%, which means that the influence of *good corporate governance* (X1), restructured loans (X2) terhadap *Business Performance* (Y) can be said to have influence large because the value is more than 0,35.

TABLE V. PATH COEFFICIENTS

Path coefficients				
-----				
	GCG	RK	BP	GCG
CR				
BP	0.453	0.233		

From the above table in the know value the influence of GCG at variabel *Business performance* (Y) of 0.453 or 45,3%, while the value of the magnitude of the effect of debt restructuring (X2) terhadap *Business Performance* (Y) of 0.233 or 23.3%.

B. Hypothesis testing

The hypothesis is accepted if the value of  $p < 0.10$ . And to see the magnitude of the level of significance by way of seeing the value of *P-values* at the output. While the beta coefficient ( $\beta$ ) is a value that shows the amount of influence between the variables studied.

- To see the magnitude of the effect is partially variable X1 to Y is equal to:  
 = direct effect X1 on Y  
 = 0,453 or 45.3%
- To see the amount of influence partially the X2 variable on Y is equal to:

= direct effect X 2 on Y  
 = 0,233 or 23,3%

- To see the magnitude of the simultaneous influence of variable Xi, X2 on Y is equal to:  
 = total direct effect X 1 against Y + total direct effect X 2 against Y  
 = 0,453 + 0.233  
 = 0.686 or 68.6%

From the calculation results above, it is obtained that the variable of good corporate governance has a partial effect on business performance. Loan restructuring variable partially influences business performance. Good corporate governance and credit restructuring variables simultaneously affect the business performance.

C. Discussion

- First hypothesis. Good corporate governance variables partially affect Business performance. At the Conventional People's Credit Bank in Sidoarjo,

good banking governance is needed, increasing the complexity of rural bank activities in Sidoarjo requires high competence to mitigate the risk of business activities. In order to improve bank

performance, protect stakeholder interests and improve compliance with laws, good governance is required including management's seriousness in applying the principles of openness, accountability, responsibility, independence, fairness and prudence in managing BPR.

- Second Hypothesis. Loan restructuring variable partially influences business performance . In people's credit banks the ability to increase the number of credit debit trays by providing soft loans to debtors and MSME actors always carries the risk of uncertainty in returning credit, one of the efforts to improve the performance of conventional rural credit banks in Sidoarjo is by providing respite time for payment by credit restructuring. either rescheduling or discounting fines or discounting credit interest.
- Third Hypothesis. Good corporate governance and credit restructuring variables simultaneously affect the business performance . Good banking governance and credit restructuring can improve banking business performance if all directors are able to carry out their duties properly, there is no credit manipulation, loans are given prudently and are not affected by conflicting interests. The level of competence of leaders and employees also colors the knowledge sharing process in Sidoarjo Conventional Rural Banks so that they can provide good business strategies.

#### IV. CONCLUSION

Good corporate governance Business partial effect on performance. Credit restructuring variable partially influences business performance. Good corporate governance and credit restructuring variables simultaneously affect the business performance. Banking governance activities also influence the level of competency of directors and employees so that prudent credit can occur. Allowance for payment so that there are no problematic customers can be given credit restructuring and all of them have an impact on the company's business performance, especially Conventional Rural Banks in Sidoarjo.
